

MAD?!! Just look inside our heads...

NEW

If you could see inside our pan & tilts you'd discover the true nature of MADness: a heady blend of innovative design, precision engineering and the finest quality components. Apart from the ones in the picture, though, you almost certainly never will. Sealed in a tough, weatherproof (IP68) case, a MAD head is totally maintenance free - fit it and forget it. Our latest proud creation is a monster. Capable of supporting 45kg over the top and a staggering 50kg side-mounted, the Homburg is designed to support today's big lens cameras. In the process, we've also solved the housing shortage with a spacious new model to match. All MAD pan and tilts are now available with continuous rotation and a range of other options, but if you have a particular problem, feel free to pick our brains...

For quality ancillary CCTV equipment you can rely on, even in crazy conditions, call a MADman today.
